How to activate license of Indusoft Web Studio v8.1+

Locate the 3 files used for activating the software license, this will be provided to who ever requires it. Contact details for support personnel is provided at the end of the document that can help with obtaining the files. The files are shown in the image below.

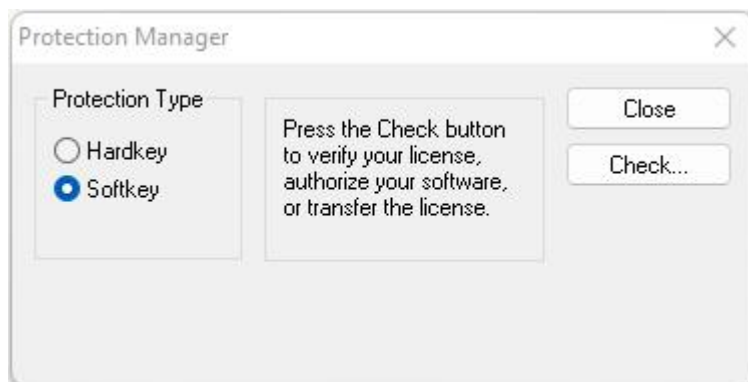

Next, the file location of Indusoft should be located. This might differ from system to system where the program files are stored, but in most cases it can be found in the following directory on a PC:
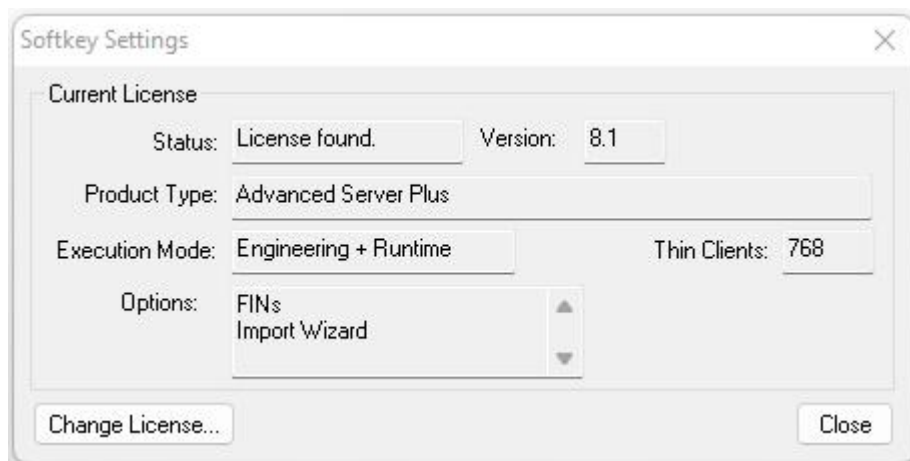

C:\Program Files (x86)\InduSoft Web Studio v8.1

From there open the **Bin** folder inside of the **InduSoft Web Studio v8.1** folder. Now you should copy the 3 files from step 1 and paste them into the **Bin** file, a message will appear telling the user that the files already exist in this directory and the user will be asked if he wished to replace them, in this case select yes for all the files.
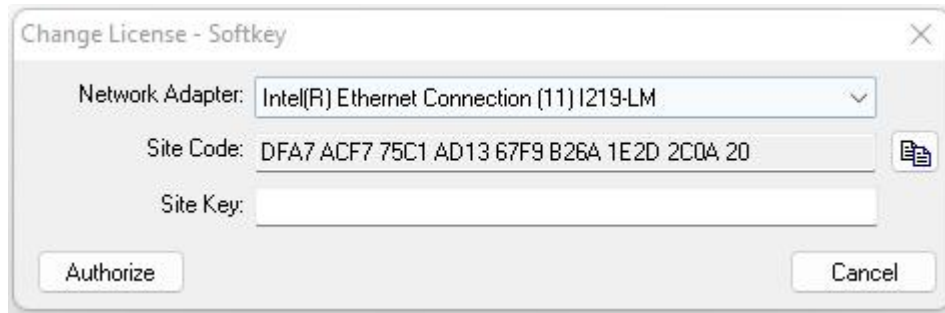

After replacing the old files with the new ones, run the new **RunUniReg** file by double clicking it. The following window should then be seen:

Select **Softkey** and then press the **Check** button. The following window will then be opened.

Note that before the license is activated all the field will be blank and not filled in like the previous image. From here on select the **Change License** button. This will open another window that looks as follows:

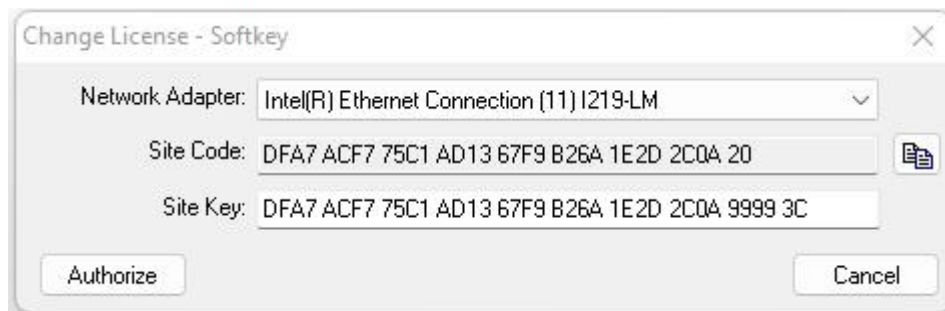

The first step after the above windows is opened is to select a device for the **Network Adapter** drop down menu, after doing so the **Site Code** will be automatically filled in. Next, copy the Site Code, paste that value into the **Site Key** field and change to last 2 characters to: **9999 3C**. The above example will look as follows:

From here select the **Authorize** button, the previous windows should then say **License Found** in the **Status** display.

Now everything can be closed and the license should be activated.
